

Module 12 Quizlet - sequences

Please tell students in advance to come with their laptops, so they can share their code screen.

1. Try the following code. What is printed? Explain

```
s1 = "Hello"

c1 = (s1[0] == 'H')

print(c1)
```

2. Fix the following code: Type it into python and fix the errors

```
fruits_yellow = ("banana", "mango")
fruits_red = ("apple")
fruits_green = ("guava")
fruits = fruits_yellow + fruits_red + fruits_green
```

- 3 Fix the following code: Type it into python shell and fix the errors

```
print("pineapple" in fruits_yellow)
print(fruits.count())
print(fruits.index(2))
```

4. Read the documentation for `string.split`, [Python string](#)
And try it out. What is the return type?
Split a string at the spaces, i.e. separate out the words
